In the Claims

Please add the following new claims:

Sub  
EI

DI

--46.(New) A method of improving data retention in a nonvolatile writable memory having a first reference level and a second reference level, the nonvolatile writable memory having a plurality of memory cells organized into sectors, each of the memory cells being in an first state when storing a charge below the first reference level, and each of the memory cells being in a second state when storing a charge above the second reference level, the method comprising:

accessing a first sector of said memory cells;

identifying a second sector of said memory cells having one or more memory cells with a charge above the first reference level and below the second reference level; and

rewriting the data values stored in the memory cells of the second sector.
